

# BERMUDAGRASS

## Welcome to Rotation Nation

Because the future of our industry depends on the efficacy of our products, PBI-Gordon established Rotation Nation. These fungicide rotation programs were developed to meet the specific needs of each region, while managing resistance by enlisting a variety of products and active ingredients, including the proven performers in our fungicide line:

- ★ **Kabuto® Fungicide SC**  
Excellent control of dollar spot and Spring dead spot!
- ★ **Segway® Fungicide SC**  
Proven protection against Pythium disease
- ★ **Tekken® Broad Spectrum Fungicide**  
One application rate controls 21 diseases for up to 28 days
- ★ **Pedigree Fungicide SC**  
The proven performance of flutolanil in a liquid formulation
- ★ **Union™ Fungicide SC**  
Superior Pythium control plus broad-spectrum disease protection

***No matter your region, PBI-Gordon fungicides are formulated to play a powerful role in your rotation program.***

Diseases of bermudagrass and zoysiagrass are the primary concerns for the Southeastern U.S., and fungicide application recommendations for this region are focused on the control of Rhizoctonia leaf and sheath spot, Pythium diseases, large patch, and Spring dead spot.

Preventative fungicide applications for leaf spot, sheath spot, and large patch are important. Leaf spot applications are made in the Spring and Fall, and leaf and sheath spot (Rhizoctonia zeae) are made from May through late Summer. Pythium diseases require fungicide applications in the Spring and Fall, and split applications for Spring dead spot are vital.
