

MID-ATLANTIC GREENS

Welcome to Rotation Nation

Because the future of our industry depends on the efficacy of our products, PBI-Gordon established Rotation Nation. These fungicide rotation programs were developed to meet the specific needs of each region, while managing resistance by enlisting a variety of products and active ingredients, including the proven performers in our fungicide line:

- ★ **Kabuto® Fungicide SC**
Excellent control of dollar spot and Spring dead spot!
- ★ **Segway® Fungicide SC**
Proven protection against Pythium disease.
- ★ **Tekken® Broad Spectrum Fungicide**
One application rate controls 21 diseases for up to 28 days.
- ★ **Pedigree Fungicide SC**
The proven performance of flutolanil in a liquid formulation.
- ★ **Union™ Fungicide SC**
Superior Pythium control plus broad-spectrum disease protection.

No matter your region, PBI-Gordon fungicides are formulated to play a powerful role in your rotation program.

Disease management concerns in the Mid-Atlantic vary drastically based on location and turf species. Bentgrass management focuses on the control of dollar spot, brown patch, Pythium diseases, Summer patch, and general Summer stress. Anthracnose is a threat to *Poa annua* putting greens in the northern parts of the Mid-Atlantic, while bermudagrass in this region is at risk of leaf spot, Pythium diseases, and Spring dead spot.

Although not included in the spray program for the Mid-Atlantic, warm-season turfgrass species in this region may necessitate Fall applications for the prevention of Spring dead spot and large patch.
